

U.S. ENVIRONMENTAL PROTECTION AGENCY SPCC FIELD INSPECTION AND PLAN REVIEW CHECKLIST

D & Z Exploration, Inc. – East Hastert Lease

Overview of the Checklist

This checklist is designed to assist EPA inspectors in conducting a thorough and nationally consistent inspection of a facility's compliance with the Spill Prevention, Control, and Countermeasure (SPCC) rule at 40 CFR part 112. It is a required tool to help federal inspectors (or their contractors) record observations for the site inspection and review of the SPCC Plan. While the checklist is meant to be comprehensive, the inspector should always refer to the SPCC rule in its entirety, the SPCC Regional Inspector Guidance Document, and other relevant guidance for evaluating compliance. This checklist must be completed in order for an inspection to count toward an agency measure (i.e., OEM inspection measures or GPRA). The completed checklist and supporting documentation (i.e. photo logs or additional notes) serve as the inspection report.

This checklist addresses requirements for onshore oil drilling, production and workover facilities (including Tier II Qualified Facilities that meet the eligibility criteria set forth in §112.3(g)(2)). Qualified facilities must meet the rule requirements in §112.6 and other applicable sections specified in §112.6, except for deviations that provide environmental equivalence and secondary containment impracticability determinations as allowed under §112.6.

The checklist is organized according to the SPCC rule. Each item in the checklist identifies the relevant section and paragraph in 40 CFR part 112 where that requirement is stated.

- Sections 112.1 through 112.5 specify the applicability of the rule and requirements for the preparation, implementation, and amendment of SPCC Plans. For these sections, the checklist includes data fields to be completed, as well as several questions with "yes," "no" "NA" answers.
- Section 112.6 includes requirements for qualified facilities. These provisions are addressed in Attachment D.
- Section 112.7 includes general requirements that apply to all facilities (unless otherwise excluded).
- Section 112.9 specifies spill prevention, control, and countermeasures requirements for onshore oil drilling, production and workover facilities
- Section 112.10 specifies spill prevention, control, and countermeasures requirements for onshore oil drilling, production, and workover facilities.

The inspector needs to evaluate whether the requirement is addressed adequately or inadequately in the SPCC Plan and whether it is implemented adequately in the field (either by field observation or record review). For the SPCC Plan and implementation in the field, if a requirement is addressed adequately, mark the "Yes" box in the appropriate column. If a requirement is not addressed adequately, mark the "No" box. If a requirement does not apply to the particular facility or the question asked is not appropriate for the facility, mark as "NA". Discrepancies or descriptions of inspector interpretation of "No" vs. "NA" may be documented in the comments box subsequent to each section. If a provision of the rule applies only to the SPCC Plan, the "Field" column is shaded.

Space is provided throughout the checklist to record comments. Additional space is available as Attachment E at the end of the checklist. Comments should remain factual and support the evaluation of compliance.

<u>Attachments</u>

- Attachment A is for recording information about containers and other locations at the facility that require secondary containment.
- Attachment B is a checklist for documentation of the tests and inspections the facility operator is required to keep with the SPCC Plan.
- Attachment C is a checklist for oil spill contingency plans following 40 CFR 109. Unless a facility has submitted a
 Facility Response Plan (FRP) under 40 CFR 112.20, a contingency plan following 40 CFR 109 is required if a facility
 determines that secondary containment is impracticable as provided in 40 CFR 112.7(d). The same requirement for
 an oil spill contingency plan applies to the owner or operator of a facility with qualified oil-filled operational equipment
 that chooses to implement alternative requirements instead of general secondary containment requirements as
 provided in 40 CFR 112.7(k).
- Attachment D is a checklist for Tier II Qualified Facilities.
- Attachment E is for recording additional comments or notes.
- Attachment F is for recording information about photos.

AMENDMENT	OF SPCC PLAN BY REGIONAL ADMINIS	STRATOR (RA)—40 CFR	112.4			
112.4(a),(c)	Has the facility discharged more than 1,000 U.S or more than 42 U.S. gallons in each of two rep			☐ Yes	✓ No	<mark>) ?</mark>
If YES	Was information submitted to the RA as re-	equired in §112.4(a)? ⁴		Yes	■No	☑ NA
	 Was information submitted to the appropri pollution control activities in the State in w 			Yes	□No	☑NA

¹ Oil discharges that result fromnatural disasters, acts of war, or terrorismare not included in this determination. The gallon amount(s) specified (either 1,000 or 42) refers to the amount of oil that actually reaches navigable waters or adjoining shorelines not the total amount of oil spilled. The entire volume of the discharge is oil for this determination.

² An ow ner/operator who self-certifies a Tier II SPCC Plan may not include any environmentally equivalent alternatives or secondary containment impracticability determinations unless reviewed and certified by a PE.

³ A reportable discharge is a discharge as described in §112.1(b)(see 40 CFR part 110). The gallon amount(s) specified (either 1,000 or 42) refers to the amount of oil that actually reaches navigable w aters or adjoining shorelines not the total amount of oil spilled. The entire volume of the discharge is oil for this determination

⁴ Triggering this threshold may disqualify the facility from meeting the Qualified Facility criteria if it occurred in the three years prior to self-certification

	Note: Volume of oil released from unreported spills and releases from wellheads is unknown					Yes	☑No	
112.4(d),(e)	Have changes requir	red bythe RA been implemen	ted in the Plan and/o	or facility	?	Yes	□No	□NA
Comments: No	release information is	lease information is provided.

	any well-head pressure that may be encountered while on the well	Li res Lino Lina	Li res Li No Li NA				
Comments: The plan adequately describes facility inspection procedures but no records could be produced to show that the procedures are followed or documented. The Plan lacks a Contingency Plan, and Management Commitment of Manpower. Previous releases of oil from wellheads gathering lines and overflowing tanks and compromised secondary containment have been addressed by remediation actions being performed by D&Z, the lease operator. Many of the actions required by a tank inspection and Flow Lin Maintenance Program have been done or are bring done as part of ongoing remediation activities but there is a lack of documentation to show these actions are attributed to SPCC related O&M procedures.							

¹⁴ Note that the implementation of a 40 CFR part 109 plan does not require a PE impracticability determination for this specific requirement

ATTACHMENT A: SPCC FIELD INSPECTION AND PLAN REVIEW TABLE

Documentation of Field Observations for Containers and Associated Requirements

Inspectors should use this table to document observations of containers as needed.

Containers and Piping

Check containers for leaks, specifically looking for: drip marks, discoloration of tanks, puddles containing spilled or leaked material, corrosion, cracks, and localized dead vegetation, and standards/specifications of construction.

Check aboveground container foundation for: cracks, discoloration, and puddles containing spilled or leaked material, settling, gaps between container and foundation, and damage caused by vegetation roots.

Check all piping for: droplets of stored material, discoloration, corrosion, bowing of pipe between supports, evidence of stored material seepage from valves or seals, evidence of leaks, and localized dead vegetation. For all aboveground piping, include the general condition of flange joints, valve glands and bodies, drip pans, pipe supports, bleeder and gauge valves, and other such items (Document in comments section of §112.9(d).)

Secondary Containment (Active and Passive)

Check secondary containment for: containment system (including walls and floor) ability to contain oil such that oil will not escape the containment system before cleanup occurs, proper sizing, cracks, discoloration, presence of spilled or leaked material (standing liquid), erosion, corrosion, penetrations in the containment system, and valve conditions.

Check dike or berm systems for: level of precipitation in dike/available capacity, operational status of drainage valves (closed), dike or berm impermeability, debris, erosion, impermeability of the earthen floor/walls of diked area, and location/status of pipes, inlets, drainage around and beneath containers, presence of oil discharges within diked areas.

Check drainage systems for: an accumulation of oil that may have resulted from any small discharge, including field drainage systems (such as drainage ditches or road ditches), and oil traps, sumps, or skimmers. Ensure any accumulations of oil have been promptly removed.

Check retention and drainage ponds for: erosion, available capacity, presence of spilled or leaked material, debris, and stressed vegetation.

Check active measures (countermeasures) for: amount indicated in plan is available and appropriate; deployment procedures are realistic; material is located so that they are readily available; efficacy of discharge detection; availability of personnel and training, appropriateness of measures to prevent a discharge as described in §112.1(b). Note that appropriate evaluation and consideration must be given to the any use of active measures at an unmanned oil production facility.

40 CFR Part 109-Criteria for State, Local and Regional Oil Removal Contingency Plans

If SPCC Plan includes an impracticability determination for secondary containment in accordance with §112.7(d), the facility owner/operator is required to provide an oil spill contingency plan following 40 CFR part 109, unless he or she has submitted a FRP under §112.20. An oil spill contingency plan may also be developed, unless the facility owner/operator has submitted a FRP under §112.20 as one of the required alternatives to general secondary containment for qualified oil filled operational equipment in accordance with §112.7(k).

109.5-	Development and implementation criteria for State, local and regional oil removal contingency plans 15	Yes	No			
(a)	Definition of the authorities, responsibilities and duties of all persons, organizations or agencies which are to be involved in planning or directing oil removal operations.		Y			
(b)	Establishment of notification procedures for the purpose of early detection and timely notification of an oil discharge including:					
(1)) The identification of critical water use areas to facilitate the reporting of and response to oil discharges.					
(2)	A current list of names, telephone numbers and addresses of the responsible persons (with alternates) and organizations to be notified when an oil discharge is discovered.					
(3)	capability of interconnection with the communications systems established under related oil removal contingency plans, particularly State and National plans (e.g., National Contingency Plan (NCP)).					
(4)	An established, prearranged procedure for requesting assistance during a major disaster or when the situation exceeds the response capability of the State, local or regional authority.					
(c)	Provisions to assure that full resource capability is known and can be committed during an oil discharge situation including:					
(1)	1) The identification and inventory of applicable equipment, materials and supplies which are available locally and regionally.					
(2)	2) An estimate of the equipment, materials and supplies that would be required to remove the maximum oil discharge to be anticipated.					
(3)	Development of agreements and arrangements in advance of an oil discharge for the acquisition of equipment, materials and supplies to be used in responding to such a discharge.					
(d)	Provisions for well defined and specific actions to be taken after discovery and notification of an oil discharge including:					
(1)	Specification of an oil discharge response operating team consisting of trained, prepared and available operating personnel.		Y			
(2)	Pre-designation of a properly qualified oil discharge response coordinator who is charged with the responsibility and delegated commensurate authority for directing and coordinating response operations and who knows how to request assistance from Federal authorities operating under existing national and regional contingency plans.		Ŋ			
(3)	A preplanned location for an oil discharge response operations center and a reliable communications system for directing the coordinated overall response operations.					
(4)	Provisions for varying degrees of response effort depending on the severity of the oil discharge.		Y			
(5)	Specification of the order of priority in which the various water uses are to be protected where more than one water use maybe adversely affected as a result of an oil discharge and where response operations may not be adequate to protect all uses.					
(e)	Specific and well defined procedures to facilitate recovery of damages and enforcement measures as provided for by State and local statutes and ordinances.		Y			

Onshore Oil Drilling, Production and Workover Facilities

¹⁵ The contingency plan should be consistent with all applicable state and local plans, Area Contingency Plans, and the NCP.

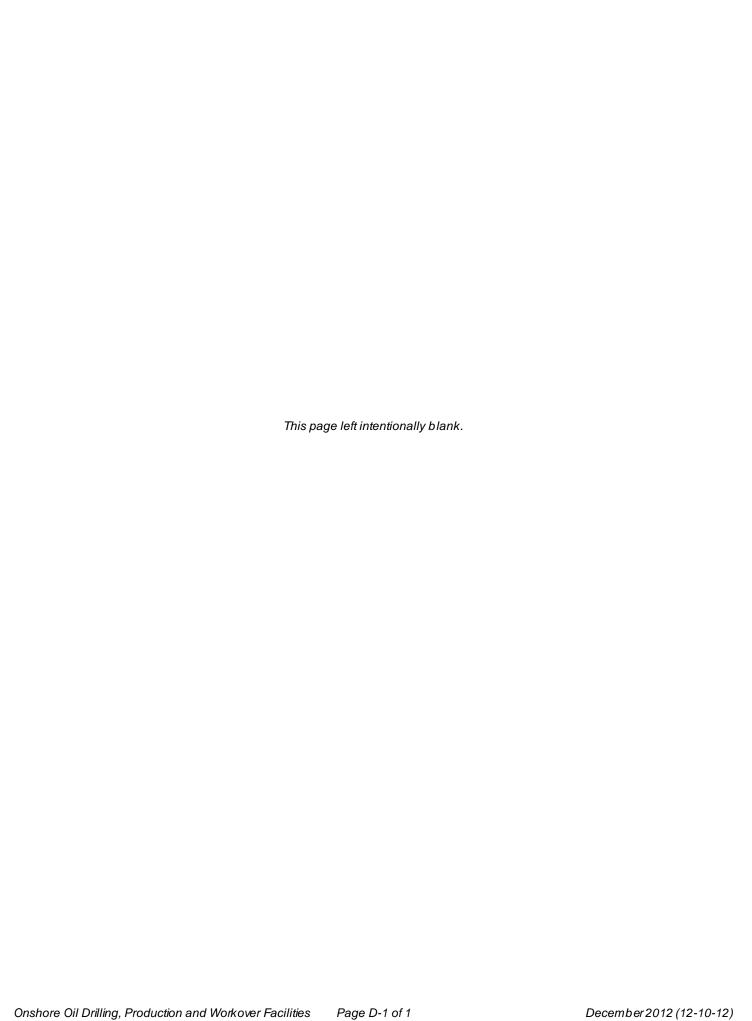

ATTACHMENT D: TIER II QUALIFIED FACILITY CHECKLIST

☑ NA

TIER II QUALIFIED FACILITY PLAN REQUIREMENTS —40 CFR 112.6(b)								
112.6(b)(1)	112.6(b)(1) Plan Certification: Owner/operator certified in the Plan that:							
(i)	He or she is familiar with the requirements of 40 CFR part 112	Yes	■No	■NA				
(ii)	He or she has visited and examined the facility 16	Yes	□No	■NA				
(iii)	(iii) The Plan has been prepared in accordance with accepted and sound industry practices and standards and with the requirements of this part			□NA				
(iv)	Procedures for required inspections and testing have been established	Yes	No	■NA				
(v)	(v) He or she will fully implement the Plan							
(vi)	The facility meets the qualification criteria set forth under §112.3(g)(2)	Yes	■ No	■NA				
(vii)	(vii) The Plan does not deviate from any requirements as allowed by §§112.7(a)(2) and 112.7(d), except as described under §112.6(b)(3)(i) or (ii)							
(viii)	(viii) The Plan and individual(s) responsible for implementing the Plan have the full approval of management and the facility owner or operator has committed the necessary resources to fully implement the Plan.							
112.6(b)(2)	Technical Amendments: The owner/operator self-certified the Plan's technical amendments for a change in facility design, construction, operation, or maintenance that affected potential for a §112.1(b) discharge	Yes	□No	□NA				
If YES				■NA				
(i)	A PE certified a portion of the Plan (i.e., Plan is informally referred to as a hybrid Plan)	Yes	No	■NA				
If YES	The PE also certified technical amendments that affect the PE certified portion of the Plan as required under §112.6(b)(4)(ii)	Yes	□No	□NA				
	(ii) The aggregate aboveground oil storage capacity increased to more than 10,000 U.S. gallons as a result of the change							
If YES	The facility no longer meets the Tier II qualifying criteria in §112.3(g)(2) be it exceeds 10,000 U.S. gallons in aggregate aboveground storage capac							
	The owner/operator prepared and implemented a Plan within 6 months following the change and had it certified by a PE under §112.3(d)	Yes	□No	□NA				
112.6(b)(3)	Plan Deviations: Does the Plan include environmentally equivalent alternative methods or	Yes	□No	□NA				
If YES	impracticability determinations for secondary containment? Identify the alternatives in the hybrid Plan:							
11123	Environmental equivalent alternative method(s) allowed under §112.7(a)(2);	Yes	□ No	□ NIA				
	Impracticability determination under §112.7(d)	Yes						
112.6(b)(4)	For each environmentally equivalent measure, the Plan is accompanied by a written statement by the PE that describes: the reason for nonconformance, the alternative measure, and how it offers equivalent environmental protection in accordance with §112.7(a)(2);	Yes	□No	□NA				
	For each secondary containment impracticability determination, the Plan explains the reason for the impracticability determination and provides the alternative measures to secondary containment required in §112.7(d)	Yes	■No	□NA				
(:)	AND							
(i) (A)	PE certifies in the Plan that: He/she is familiar with the requirements of 40 CFR Part 112	□ Voo	Пио	□NA				
(A) (B)	He/she or a representative agent has visited and examined the facility			□ NA				
(C)	The alternative method of environmental equivalence in accordance with §112.7(a)(2) or the determination of impracticability and alternative measures in accordance with §112.7(d) is consistent with good engineering practice, including consideration of applicable industry standards, and with the requirements of 40 CFR Part 112.			□NA				
Comments: The	facility is not a qualified Tier II facility.							

 $^{^{\}rm 16}$ Note that only the person certifying the Plan can make the site visit

ATTACHMENT E: ADDITIONAL COMMENTS

EPA received a spill complaint on the Hastert Leases on June 11, 2015 by the landowner. The complaint was referred to KCC by EPA but EPA response personnel also responded to the site on June 17, 2015. Multiple discharge and SPCC violations were observed, including multiple discharges of oil from secondary containment, overflowing tanks, leaking wellheads and gathering lines. It was determined that most of the issues had been caused by the prior operator, Tailwater, Inc. who had sold the lease to D&Z Exploration, Inc., on April 1, 2015. D&Z acknowledged the multiple problems associated with the lease and stated their intention to address them but had been hindered by wet weather this spring. On June 23, 2015, a coordination meeting was held on site with interested parties, including D&Z, KCC, the landowner, and EPA. KCC agreed to take the lead in overseeing remediation actions and D&Z agreed to commit the resources needed to address the issues in a timely manner on a schedule to set out by KCC. EPA in turn, issued D&Z a Notice of Federal Interest and opened up the Oil Pollution Fund to oversee the remediation work and take over the action if we determined that satisfactory progress was not being made by D&Z.

Site remediation activities have been ongoing since late June and satisfactory progress is being made.

During the initial response action, it was determined that D&Z Explorations did not have SPCC Plans for either the Hastert East or Hastert West Leases. On August 26, 2015 an SPCC inspection was conducted at both the Hastert East and Hastert West Leases. Neither lease has a signed SPCC plan in place yet. The Hastert East Lease has a "draft" SPCC plan that was provided for EPA review. D&Z could not provide requested documentation regarding required training, inspections, or testing.

ATTACHMENT F: PHOTO DOCUMENTATION NOTES

Photo#	Photographer Name	Time of Photo Taken	Compass Direction	Description
1	Paul Doherty	AM 8/26/2015	North	Hastert East Lease tank battery. The plan states that the dike height is 1.5 feet which is not obvious from field observations.
2	Paul Doherty	AM 8/26/2015	North	Hastert East Lease dikes have been reconstructed and oil inside and outside containment has been removed by ongoing remediation actions. Gypsum has been applied to soil outside containment at the direction of the KCC.
3	Paul Doherty	AM 8/26/2015	Southwest	Northeast corner of containment has been reconstructed and oil contaminated soil has been excavated and the ground treated with gypsum under KCC over sight.
4	Paul Doherty	AM 8/26/2015	Northeast	View Hastert East Lease tank battery inside containment.
5	Paul Doherty	AM 8/26/2015	North	Example of wellhead in proximity to surface water (in background).
6	Paul Doherty	AM 8/26/2015	Northwest	Another view of wellhead in proximity to surface water (in background). Peat moss absorbent applied to oil leakage at well head pump rods was indication that there is an active gathering line maintenance program in place.
7	Paul Doherty	AM 8/26/2015	Northwest	Evidence of a well head rod bushing/gasket leak that had not yet been attended to. The situation was pointed out to the operator who agreed to address the situation.
8	Paul Doherty	AM 8/26/2015	Northwest	View of peat moss absorbent applied to old well head oil release. Visual evidence was that the release had occurred under the previous lease operator and had run some distance awayfrom the well head.
9	Paul Doherty	AM 8/26/2015	Northwest	Another well head where peat moss absorbent has been applied to old well head oil release. Visual evidence was that the release had occurred under the previous lease operator and had run some distance awayfrom the well head.
